

GEOMETRIC DOMINO

For 2-4 Players

Objective

Be the first player to lay down all your dominoes.

Setup

Shuffle all dominoes face down. Each player draws one domino to determine the starting player (highest value goes first). Reshuffle the dominoes face down. The starting player draws 7 dominoes, followed by the others in clockwise order. Set aside any remaining dominoes. Keep your dominoes hidden from other players.

Gameplay

The first player places a domino face up in the center of the table. The next player must play a domino that matches either end of the domino on the table, placing it end-to-end (doubles are placed crosswise). If a player cannot play, they "knock," skip their turn, and play passes to the next player.

Winning

The first player to lay down all their dominoes wins. If no one can play, The player with the fewest tiles remaining in their hand wins.
